

Ecozones of Canada

ArcView Lesson Student Activity Sheets

Name: _____

**Answers to the following questions can be obtained while completing the ArcView Ecozone of Canada Activity.*

USE OF PROJECTION

1) Does the first representation of Canada in this assignment look like most maps you have seen? What can you say about how Canada appears projected this way?

2) How did the view of Canada change as you tried different projections? List 5 and describe how they appear here:

3) When changing projections what would altering the values of the *central meridian*, *false easting* and *false northing* do to the view of the map?

COMPARING LAYERS

4) Compare the extent of the permafrost and the forested area by checking the box to open and close layers. Is there any similarities or differences between the forested areas and the permafrost areas?

5) Are the Prairie and Mixedwood Plains ecozones to the south of permafrost areas?

6) Why are the Prairie and Mixedwood Plains non-forested?

CREATING CHARTS

7) Viewing the chart that is created. Which marine ecozone has the longest coastline?

8) Which marine ecozone does not touch the coastline of Canada?

CREATING LAYOUTS

9) Include a printed version of your assignment. The layout should include a view of Canada and a chart. Remember to have a title with a purpose.

10) List your title or purpose of your map here.

11) Who would use, and how would these people use your map?
