

Teacher Package

Academic Lesson

Title: Canada's Ecozones a good place to live

Time requirement: Prior learning and skill development:
2 to 3 periods of 70 minutes each
MFworks lesson:
1 to 2 periods of 70 minutes each
ArcView lesson:
1 to 2 periods of 70 minutes each
Student research and proposal writing:
1 to 2 periods of 70 minutes each

Teacher Instructions:

- Description of the Task
(see Academic Performance Task, Expectations and Rubric).
- Final Product
Students will create a tourism brochure outlining which ecozone in Canada is the best place to live. The brochure will outline the landforms, climate, vegetation, wildlife, and the human activities occurring within the chosen ecozone. In their brochure, students are to justify why in their opinion this ecozone is the best place to live or visit. Justification can include employment, recreational opportunities, standard of living or any other criteria they feel is important. The completed brochure is to include supporting visuals, such as maps, graphs, charts, diagrams, or pictures.
- Assessment and Evaluation
The final product will be assessed using the Expectations and the Performance Task Rubric. Formal and informal assessment of the students based on prior knowledge, lesson objectives, production of their MFworks and ArcView Maps; research process could be done using the Background Information, the students' activity sheets (on the Background and on the MFworks and ArcView lessons), and the Rubric for assessing Maps. In this lesson, students are going to be using an A.V.H.R.R. image. NOAA (the National Oceanic and Atmospheric Administration) in the U.S.A. is responsible for a number of satellites carrying sensors for meteorological applications and regional earth observation and reconnaissance. One of those sensors is the A.V.H.R.R. (Advanced High Resolution Radiometer). Self- or peer assessments and collaboration may be useful to the teacher and students.
- Accommodations
Accommodations that are normally provided in the regular classroom for students with special needs should be provided in the administration of this performance task.
- Rubric
Introduce the task-specific rubric to the students before giving the administrative task. Review the rubric with the students and ensure that each student understands the criteria and descriptions for achievement at each level.
Some students may perform below level 1. It will be important to note the characteristics of their work in relation to the criteria in the assessment rubric and to provide feedback to help them improve.
