

Canada's Parks and Conservation Areas Arc View Parks Student Activity Sheet

Name: _____

**Answers to the following questions can be obtained while completing the ArcView Canada's Parks and Conservation Areas.*

1. Does this make it easier to see the classes?

2. Can you see the parks better?

3. What can you say about size distribution of the parks? What is the reason for this pattern?

4. Fill in table 1 for the Atlantic Provinces. List the name and the area of the Parks in the table provided. Start with the largest park and list in descending order to the smallest park.

Table 1

National Park Name	National Park Area / Km sq.

5. Perform the same test on a different area of Canada. Record these results in table 2.

Table 2

National Park Name	National Park Area / Km sq.

6. Where are most of the new parks located? Why?

7. Which is the oldest national park and when was it established?

8. Which are the newest national parks and when were they established?

9. Which three ecozones have the highest percentage total conservation area?

10. Which two have the lowest?

11. Find the name of the ecozone with all of its conservation area represented by national parks.

12. Find the name of the ecozone, which has very little national park representation?

13. Based on this analysis, which ecozone should be considered for new national parks and why?
