

ArcView Landforms of Canada Student Activity Sheet

Name: _____

**Answers to the following questions can be obtained while completing the ArcView Landforms of Canada Activity.*

1) How is it different from the non-referenced map?

2) What can you say about the distribution of the two primary landforms (Mountains and Plains)
i.e. where they are located in Canada?

3) What can you say about the distribution of mountains?

4) Are there any ecozones not represented? Why?

5) Explain the distribution patterns you see for:

Plains, _____

Hills, _____

Plateau, _____

Valleys _____

- 6) Describe the different patterns displayed when illustrating the Minimum Elevations of Canada. Explain why.

- 7) Now compare with the Maximum Elevations of Canada. Is this the same pattern as for Minimum Elevations? Explain.

- 8) How do mean elevation and elevation difference compare to the previous patterns

- 9) By comparing the charts, which ecozones show the largest elevation difference?

- 10) Which ecozones have very little elevation difference?

- 11) By regrouping the surface forms, which ecozones

-have the most wetland surface? _____
-would be the easiest to traverse? _____
-would have the steepest inclines? _____

- 12) What happens when you select an ecozone that you not linked to an image?

- 13) Produce a layout for printing your map. Include your layout with this exercise sheet for evaluation. What is the purpose of your map?
