

Applied Performance Task, Expectations and Rubric

The Task

Students are to acquire various images from a variety of sources, including the Internet. The collected images should depict humans interacting within the various landscapes of Canada's distinct ecozones. The completed Arcview project is to demonstrate the student's understanding of how human activities are largely determined by the landforms in which we live. This is to be demonstrated by linking pictures of the various human activities occurring within the distinct landforms in each of Canada's ecozones.

Expectations

This task gives students the opportunity to demonstrate achievement of the following selected expectations from three strands: Geographic Foundations: Space and Systems; Human Environment Interactions; and Methods of Geographic Inquiry.

Students will:

1. demonstrate an understanding of how natural and human systems interact within ecozones
2. analyse the natural and human factors that create regions
3. use appropriate technology (e.g., computer maps, graphs, air photos) to present geographic information
4. demonstrate an understanding of how natural systems (e.g., climate, soils, landforms, natural vegetation, wildlife) influence cultural and economic activities (e.g., recreation, transportation, employment opportunities);
5. select and use appropriate methods for displaying geographic data;
6. create and use effectively photographs, charts, graphs, models, and diagrams.

Prior Knowledge and Skills

To complete this task, students are expected to be able to demonstrate the following:

- knowledge of the definition of an ecozone
- identify and describe Canada's landforms and regions
- use maps and photos to interpret landform and regional relationships
- understanding of the physical processes that have shaped Canada's ecozones (e.g. rock cycle; tectonic forces such as volcanism, folding, and faulting; glaciation)
- understanding of research methods using a variety of source materials
- ability to use a variety of tools and technologies for research.

Task Rubric – Landforms of Canada (Building an Arcview Project)

Expectations	Criteria	Level 1 (50 – 59)	Level 2 (60 –69)	Level 3 (70 – 79)	Level 4 (80 -100)
<u>Knowledge / understanding</u>					
1,4	- Demonstrates an understanding of how natural and human systems interact within ecozones - Demonstrates an understanding of how natural systems influence cultural and economic activities	- Demonstrates little understanding of how natural and human systems interact within ecozones - Demonstrates little understanding of how natural systems influence cultural and economic activities	- Demonstrates some understanding of how natural and human systems interact within ecozones - Demonstrates some understanding of how natural systems influence cultural and economic activities	- Demonstrates considerable understanding of how natural and human systems interact within ecozones - Demonstrates considerable understanding of how natural systems influence cultural and economic activities	- Demonstrates a high degree of understanding of how natural and human systems interact within ecozones - Demonstrates a high degree of understanding of how natural systems influence cultural and economic activities
<u>Thinking / Inquiry</u>					
2	Analyses the natural and human factors that create regions	Gathers data on the natural and human factors that create regions	Identifies variables of the natural and human factors that create regions	Draws conclusions of the natural and human factors that create regions	Analyses the natural and human factors that create regions
<u>Communication</u>					
5	Selects and uses appropriate methods for displaying geographic data	Uses few methods for displaying geographic data	Uses some methods for displaying geographic data	Uses many methods for displaying geographic data	Uses many appropriate methods for displaying geographic data
<u>Application</u>					
6	Creates and uses effectively photographs, charts, graphs, models, and diagrams	Uses few photographs, charts, graphs, models, and diagrams	Uses some photographs, charts, graphs, models, and diagrams	Uses effectively photographs, charts, graphs, models, and diagrams	Uses photographs, charts, graphs, models, and diagrams with purpose
