

Teacher Package

Academic Lesson

Title: Landforms of Canada – Building an ArcView Project

Time requirement: Prior learning and skill development:
1 period of 70 minutes each
ArcView lesson:
1 to 2 periods of 70 minutes each
Student research and proposal writing:
1 to 2 periods of 70 minutes each

Teacher Instructions:

- Description of the Task
(see Academic Performance Task, Expectations and Rubric).
- Final Product
Each student will submit their ArcView Map showing hot linked pictures with informative text file that demonstrate the various human activities occurring within distinct landforms in each of Canada's ecozones.
- Assessment and Evaluation
The final product will be assessed using the Expectations and the Performance Task Rubric. Formal and informal assessment of the students based on prior knowledge, lesson objectives, production of their ArcView Map, research process done using the Background Information, the students' activity sheets (on the Background and on the ArcView lesson), and the Rubric for assessing Maps. We suggest also that the students investigate the following website to help them find landform pictures:
http://sts.gsc.nrcan.gc.ca/tsdweb/landf_new.asp.
Internet research is needed to find human activities associated with the landforms in each ecozone. Self- or peer assessments and collaboration may be useful to the teacher and students.
- Accommodations
Accommodations that are normally provided in the regular classroom for students with special needs should be provided in the administration of this performance task.
- Rubric
Introduce the task-specific rubric to the students before giving the administrative task. Review the rubric with the students and ensure that each student understands the criteria and descriptions for achievement at each level.
Some students may perform below level 1. It will be important to note the characteristics of their work in relation to the criteria in the assessment rubric and to provide feedback to help them improve.

Teacher Package

Applied Lesson

Title: Landforms of Canada – Building an ArcView Project

Time requirement: Prior learning and skill development:
1 period of 70 minutes each
ArcView lesson:
1 to 2 periods of 70 minutes each
Computer Presentation
1 to 2 periods of 70 minutes each
