

Canada's Population Trends ArcView Lesson Student Activity Sheets

Name: _____

**Answers to the following questions can be obtained while completing the ArcView Canada's Population Trends Activity.*

1) How is it different from the non-referenced map?

2) What is the general pattern of population by ecozones?

3) Does the area of the ecozone have an effect on its population?

4) Population density is the number of people per square kilometre.

A. What is the general pattern of population density by ecozone?

B. How is it different than 1996 population done above? Why?

5) Why is it important to map changes in population?

6) Which ecozone has had the greatest change in population? Consider both increases and decreases. _____

7) What implications does this have for the social, economic and environmental structure of the ecozone?

8) Which ecozones have the next greatest population change? _____

9) What does the chart tell you about the population growth in the Mixedwood Plains ecozone between 1971 and 1996?

10) What can you say about the population change in the two maritime ecozones?

11) Select another ecozone or group of ecozones.

- Write down what you expect to see in the charts for change in population density
- Produce the chart and compare with what you expected.

Expected results:

Actual Results:

12) Are there differences in what you expected to see and the graph for the selected ecozone(s)? Why?

13) What can you say about the distribution of population centres? You may have to edit legend colour to optimize the visibility of the points. You can zoom in to get a better look.

14) What can you say about distribution of population centres based on size? Zoom in to get a good look.

15) How does this compare with what we discovered using ecozone data?

16) Give pros and cons for using the two methods.

17) Using your cursor, find a large population centre near where you live.

Population Centres

Ecozone

Using the cursor, find four other large population centres in Canada that are in ecozones different from your own.

Record the name of each city and the ecozone in which it is found.

Zoom in to locate population centres more easily.

Population Centres

Ecozone

18) How does the 1991 population data for the five centres compare? Can you draw a graph with this data?
