

Applied Performance Task, Expectations and Rubric

The Task

Students begin by examining distribution patterns of transportation systems. Road, rail, and air travel patterns are examined. Through the analysis students will determine the relationships between population centers and various transportation networks. Software functions of query, statistics, buffer creation and length measurement will be used in the exploration of the various transportation networks. Students are asked to use these skills to determine the location for a new business. The type of enterprise being proposed is to be researched to determine the ideal location based on closeness to: population centers and various transportation networks. Students are instructed to include supporting visuals, such as maps, graphs, charts, diagrams, or pictures, in the proposal.

Expectations

This task gives students the opportunity to demonstrate achievement of the following selected expectations from three strands: Geographic Foundations: Space and Systems; Understanding and Managing Change; and Methods of Geographic Inquiry.

Students will:

1. demonstrate an understanding of the characteristics of human systems (e.g., transportation, population, communication, energy networks, industry);
2. identify and explain the geographical requirements that determine the location of businesses, industries, or transportation systems;
3. explain the positive and negative impacts on people and the environment of the manufacture, transportation to market, and consumption of selected products (e.g., cars, clothing, tropical food products);
4. select and use appropriate methods for displaying geographic data;
5. use appropriate technology (e.g., computer maps, graphs, air photos) effectively to present geographic information;
6. provide evidence to support conclusions and opinions.

Prior Knowledge and Skills

To complete this task, students are expected to be able to demonstrate the following:

- knowledge of the definition of an ecozone
- ability to read, analyse, and interpret graphs and maps
- ability to use a variety of tools and technologies for research
- use GIS to study the location of a new industry and the reasons for their location
- identify and describe location factors that influence manufacturers
- examine future trends for tertiary industries.

Task Rubric – Proposal for the Location of a New Business					
Expectations	Criteria	Level 1 (50 – 59)	Level 2 (60 –69)	Level 3 (70 – 79)	Level 4 (80 –100)
<u>Knowledge / understanding</u>					
1	Demonstrate an understanding of the characteristics of human systems	Demonstrates little understanding of the characteristics of human systems	Demonstrates some understanding of the characteristics of human systems	Demonstrates considerable understanding of the characteristics of human systems	Demonstrates a high degree of understanding of the characteristics of human systems
<u>Thinking / Inquiry</u>					
2	Identify and explain the geographical requirements that determine the location of businesses, industries, and transportation systems, and make predictions about future locations of these enterprises and systems	Few identifications and explanations of the geographical requirements that determine the location of businesses	Some identifications and explanations of the geographical requirements that determine the location of businesses	Considerable identifications and explanations of the geographical requirements that determine the location of businesses	A high degree of identifications and explanations of the geographical requirements that determine the location of businesses
<u>Communication</u>					
4,5,6	- Use visuals to illustrate the location of the industry - Write a clear and convincing proposal	- Uses visuals to illustrate the location of the industry to a limited degree - Writes a proposal that is not very clear or convincing	- Uses visuals to illustrate the location of the industry to some degree - Writes a proposal that is somewhat clear and convincing	- Uses visuals to illustrate the location of the industry to a considerable degree - Writes a proposal that is generally clear and convincing	- Uses visuals to illustrate the location of the industry to a high degree - Writes a proposal that is very clear and convincing
<u>Application</u>					
3	Explain the positive and negative impacts on people and the environment of the manufacture, transportation to market, and consumption of selected products (e.g., cars, clothing, tropical food products)	Shows limited understanding of the implications	Shows some understanding of the implications	Shows considerable understanding of the implications	Shows thorough understanding of the implications
