

Climate and Precipitation ArcView Student Activity Sheet

Name: _____

**Answers to the following questions can be obtained while completing the ArcView Climate and Precipitation Activity.*

1) How is it different from the non-referenced map?

2) Can you identify the ecozone with the highest annual precipitation?

3) Which has the second highest?

4) What do the two wettest ecozones have in common?

5) Why does Newfoundland have lower precipitation than the rest of the Atlantic provinces?

6) Which ecozones do you suspect have orographic precipitation?

7) Which ecozone has the greatest orographic precipitation? _____

8) What other characteristics contribute to orographic precipitation?

9) From the total precipitation map identify two ecozones that have rain shadow components?

10) Can you describe the pattern of mean annual temperature across Canada?

11) Can you describe the maritime and continental effects?

12) Can you describe the distribution of the snow/rain ratio?

13) What does a high ratio mean? _____

14) How does this relate to temperature? _____

15) What about a low ratio? _____

16) Identify the ecozones where crop X could be grown if it requires more than 200 growing days? _____

17) With the addition of 20 more growing days as a result of climate change, how many ecozones can now support growing Crop X? _____

18) Identify the ecozones, which have been added due to climate change. _____
