

Climate and Precipitation **Student Activity Sheets**

Name: _____

****Most of the answers to these questions can be found in the Climate and Precipitation background sections.***

- 1) From Table 1, in the background information of Climate and Precipitation, which two ecozones stand out as receiving greater amounts of precipitation than the average?

- 2) What kind of climate do these ecozones have?

- 3) Which two ecozones do the Great Lakes water bodies affect?

- 4) Although the Arctic regions are basically surrounded by water, why do they not have a maritime climate?

- 5) Using Graph 1, how do the amounts of snow to rain vary across the ecozones?

- 6) Looking at the charts, how can you relate the number of growing days to the location of each ecozone?

- 7) Which two ecozones never get above freezing?

Which ecozone has the warmest minimum low? _____

Which ecozone has the highest annual temperature? _____

Which ecozone has the lowest? _____

- 8) What other factors would have to be considered in growing plants or crops other than the number of growing days?

- 9) Which ecozone would probably be most productive?

- 10) Describe in detail its climate from information gathered from the charts. Which ecozone would you consider to have the worst climate? Describe it.

- 11) Search the web sites listed in the Climate Precipitation Internet Resources for more information on the effects of climate change. Write a short essay on how climate change would affect you in your everyday activities. Use references to the data tables and graphs you have worked with in this exercise.
