

Rubric Evaluation of Student Achievement

Cartography Skills

THE TASK

Students are expected to develop skills in the art of cartography as they explore Global Sustainable Agriculture sets of data. The opportunity to demonstrate cartographic skills can be assessed for this lesson.

EXPECTATIONS

This task gives students the opportunity to demonstrate achievement of the following expectation from one strand: Methods of Geographic Inquiry.

Students will:

GI2.07 – produce mental, thematic, and choropleth maps to illustrate local or global patterns.

PRIOR KNOWLEDGE AND SKILLS

To complete this task, students are expected to be able to demonstrate the following:

- select and use appropriate methods for displaying geographic data;
- use different types of maps (e.g., road, topographic, thematic) effectively to interpret geographic relationships;
- ability to read, analyse, and interpret graphs and maps
- demonstrate a knowledge of technologies used in geographic inquiry (e.g., Geographic Information Systems (GIS), hypermedia);
- demonstrate an understanding of the methods used to collect, organize, manipulate, and interpret geographic data.
- use statistical methods (e.g., average, median, correlation) effectively when analyzing geographic information.

TASK RUBRIC – CARTOGRAPHIC SKILLS					
Expectations	Criteria	Level 1 (50 – 59)	Level 2 (60 - 69)	Level 3 (70 – 79)	Level 4 (80 -100)
<u>KNOWLEDGE / UNDERSTANDING</u>					
GI2.07	Title	Fails to identify area shown	Identifies area shown	Identifies area shown, topic and purpose, or focus	Identifies area shown, topic and purpose, or focus is separated with border
<u>THINKING / INQUIRY</u>					
GI2.07	Legend	Offers little explanation of the meaning of symbols and colours	Offers some explanation of the meaning of symbols and colours	Offers considerable explanation of the meaning of symbols and colours	Offers a high degree of explanation of the meaning of symbols and colours
<u>COMMUNICATION</u>					
GI2.07	- Date / projection - Direction: Represented in two ways. - By direction arrow or symbol - By the use of latitude and longitude	- Date / projection is not included - Direction is not included	- Date is included but not projection (or vice versa) - Direction is indicated with arrow	- Date / projection is included - Direction is indicated with arrow and latitude / longitude lines	- Date / projection is included within legend box - Direction is indicated with arrow and latitude / longitude lines are labelled
<u>APPLICATION</u>					
GI2.07	- Scale - Borders	- Fails to allow reader to calculate distance and area - Little use of borders	- Allows reader to calculate distance and area - Some use of borders	- Allows reader to calculate distance and area / shown in appropriate units - Appropriate use of borders	- Allows reader to calculate distance and area / shown in appropriate units / style - The use of borders sets the map apart from other information

Rubric Evaluation of Student Achievement

TASK RUBRIC – GIS HOMEWORK (RESEARCH PAPER ON GLOBAL SUSTAINABLE AGRICULTURE)					
Expectations	Criteria	Level 1 (50 – 59)	Level 2 (60 - 69)	Level 3 (70 – 79)	Level 4 (80 -100)
<u>KNOWLEDGE / UNDERSTANDING</u>					
HE1.01	Demonstrate an understanding of how human induced changes in natural systems can diminish their capacity for supporting human activity.	Show limited understanding of how human induced changes in natural systems can diminish their capacity for supporting human activity.	Shows some understanding of how human induced changes in natural systems can diminish their capacity for supporting human activity.	Shows considerable understanding of how human induced changes in natural systems can diminish their capacity for supporting human activity.	Shows thorough understanding of how human induced changes in natural systems can diminish their capacity for supporting human activity.
<u>THINKING / INQUIRY</u>					
HE2.02	Analyse the impact of past and current trends in agriculture.	Limited analysis of the impact of past and current trends in agriculture.	Some analysis of the impact of past and current trends in agriculture.	Considerable analysis the impact of past and current trends in agriculture.	Thorough analysis the impact of past and current trends in agriculture.
<u>COMMUNICATION</u>					
GI1.02 GI2.06	- Demonstrate an understanding of the technologies used in the analysis and synthesis of geographic data. - Draw conclusions or make judgments or predictions on the basis of reasoned analysis.	- Show limited understanding of the technologies used in the analysis and synthesis of geographic data. - Draw limited conclusions or make judgments or predictions on the basis of reasoned analysis.	- Shows some understanding of the technologies used in the analysis and synthesis of geographic data. - Draw some conclusions or make judgments or predictions on the basis of reasoned analysis.	- Shows considerable understanding of the technologies used in the analysis and synthesis of geographic data. - Draw considerable conclusions or make judgments or prediction on the basis of reasoned analysis.	- Shows thorough understanding of the technologies used in the analysis and synthesis of geographic data. - Draw thorough conclusions or make judgments or predictions on the basis of reasoned analysis.
<u>APPLICATION</u>					
GI2.02 UCV.01	- Analyse cause and effect and sequence relationships in geographical data. - Analyse, forecast, and evaluate changes in the human use of the earth and its resources.	- Limited analysis, cause and effect and sequence relationships in geographical data. - Limited analysis, forecast, and evaluates changes in the human use of the earth and its resources.	- Some analysis, cause and effect and sequence relationships in geographical data. - Some analysis, forecast, and evaluates changes in the human use of the earth and its resources.	- Considerable analysis, cause and effect and sequence relationships in geographical data. - Considerable analysis, forecast, and evaluates changes in the human use of the earth and its resources.	- Thorough analysis cause and effect and sequence relationships in geographical data. - Thorough analysis, forecast, and evaluates changes in the human use of the earth and its resources.
