

NAME: _____

Student Worksheet 9
THE GLOBAL ECONOMY GIS LESSON
DATE: _____

Instructions: The following answers can be found in the GIS lesson.

1. Can you see and describe the distribution of developed countries, developing and under developed countries?

2. Describe the pattern in the GDP you see in the European region?

3. How do the maps change? What are some possible reasons for the changes? Describe the change in maps and provide possible reasons for the changes?

4. How did the map and legend change?

5. How did the map and legend change with the different classification types?

6. Why is it important to select the proper classification?

7. By zooming in and comparing the charts, can you describe the graphs of several countries?

8. What does this tell you about income equity?

9. Select several countries and compare the charts and data with the mythical ideal graph presented above. What can you say about the income inequity in each of the selected countries?

10. After plotting the data as Lorenz curves can you describe the income equity for each of the countries?

11. List five countries that had a total external debt greater than \$10 billion?

12. Describe the global pattern of external debt over \$10 Billion in 2000?

13. List five countries that had a total external debt greater than \$15 billion in 1987?

14. Describe the global pattern of external debt over \$15 Billion in 1987?

15. What can you say about the global distribution of Population living below \$2/day?

16. Are there regions not represented?

17. Why?

18. Explain the distribution patterns you see for poverty?

19. How does it compare with the map for \$2/day?
