

Activity 10

LEVELS:

Grades 9 to 12

COURSES:

CDG3M, CGF3M, CGW4U,
CGU4U, CGR4M, CGR4E

TASK:

Through GIS processes,
Students investigate the current
and changing nature of the global
economy.

EXPECTATIONS:

The student will:

- Explore the world economy in relation to GDP, poverty, debt, investment and income equity.
- Prepare maps showing GDP, poverty, debt, investment and income equity.
- Analyze world poverty and external debt.
- Use and query data tables linked and associated with maps.
- Compute and use new data tables.
- Display computed data using charts.
- Prepare a map layout for printing.

TIMEFRAME:

90 Minutes

ACHIEVEMENT CATEGORIES:

Knowledge/Understanding
Thinking/Inquiry
Communication
Application/Making Connections

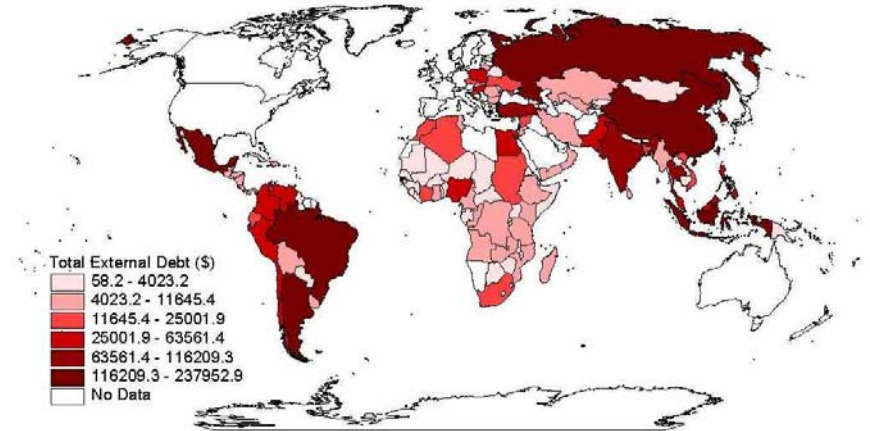

MATERIALS:

Computer system with ArcView
GIS software

VOCABULARY:

GDP
Foreign investment
Poverty
GINI index
Development assistance

Total External Debt

Global Economy

PROCEDURE:

1. Students will research background information on the global economy.
2. Students will download data sets needed for GIS analysis of the global economy (GDP, foreign investment, poverty, income equity, development assistance)
3. Students will follow the defined GIS exercise to develop products that provide insight into the current and changing global economy.
4. Students will use the GIS output products to answer questions that are imbedded into the exercise.

HOMEWORK SUGGESTION:

Research paper:

1. Select an additional aspect of the economy. (E.g. Corporations, exports / imports, spending profiles, etc.)
2. Research the selected topic in order to develop a background paper and define a GIS project.
3. Find, select and acquire data to be used in the GIS project.
4. Produce GIS products to support the background paper.
5. Define the implications for the global economy.

DISCUSSION**Knowledge/Understanding**

1. What is the global economy? Compare economic variables in several different countries (developed, developing, undeveloped).
2. How can countries move towards a sustainable economy?
3. Which countries show positive change and which countries show negative change? Why?
4. How can the world move towards a sustainable economy?

Application/Making Connections

5. Where do we see a sustainable economy in the real world?

Thinking/Inquiry

Start a discussion of the following:

6. What do we need to know in order to measure the global economy?
7. What is needed to improve the global economy (e.g. leadership, communication, trust, legislation, technology, trade, understanding of consequences, examples of failure, etc)
8. How does GIS analysis help to understand the complexity of the global economy?
